Delivering Performance and Choice

Optimizing wireguided cannulation and
the treatment of pancreatico-biliary diseases

Boston
Scientific

▶ About TRUEtome

TRUEtome is the cannulating Sphincterotome that has the potential to bring utility to every endoscopic retrograde cholangiopancreatography (ERCP).

Designed for performance, the TRUEtome Cannulating Sphincterotome is for the physician who prefers over-the-wire devices and values having options when it comes to guidewire selection.

“The place of sphincterotomes in ERCP has changed considerably over the last 20 years. The ability to pass a guidewire of any size and the ability to manipulate the tip makes them an essential, everyday tool for cannulation as well as sphincterotomy.”

— David Carr-Locke, M.D.
Beth Israel Medical Center
New York, New York

▶ Device Features

Center Guidewire Lumen design allows the guidewire to extend from the center of the sphincterotome to aid in positioning and facilitates wire-guided cannulation.*

Wireguided Cannulation reduces the risk of post-ERCP pancreatitis compared with the standard contrast injection method.¹

Center Injection Lumen design allows injection of contrast to exit from the center of the catheter enabling delivery of contrast to the intended duct.

*Does not apply to 4.9Fr diameter.

1. Cennamo et al. Can a Wire-Guided Cannulation Technique Increase Bile Duct Cannulation Rate and Prevent Post-ERCP Pancreatitis?: A Meta-Analysis of Randomized Controlled Trials. The American Journal of Gastroenterology, 2009.

▶ Device Features

Sphincterotome design accommodates **Multiple Guidewire Diameters** from .018 – .035" and allows for use of multiple guidewires during a procedure.*

Sphincterotome Multiple Tip Sizes

accommodate varying patient anatomies and facilitates cannulation:

3.9Fr
(.018-.025")

4.4Fr
(.018-.035")

4.9Fr
(.018-.035")

*TRUEtome 3.9Fr Sphincterotome accepts a maximum guidewire of .025".

▶ Device Features

Controlled Steerability enhances positioning for ERCP cannulation and sphincterotomy. Steerability enables intraductal selective cannulation to aid in accessing the pancreaticobiliary tree.

Handle Brake helps maintain catheter bow for all tip sizes and added control during sphincterotomy.

Boston Scientific is committed to improving patient care

for the management of pancreatobiliary diseases, including: gall bladder and biliary stones; pancreatic stones; cholangiocarcinoma; pancreatic cancer; primary sclerosing cholangitis; and sphincter of oddi dysfunction.

“ *Having a reliable sphincterotome is critical to a successful procedure and that helps patient care by reducing the risk of complications.* ”

— **David Carr-Locke, M.D.**, Beth Israel Medical Center
New York, New York

Through innovation and continuous improvement

Boston Scientific offers a wide range of therapeutic accessories for the diagnosis and treatment of pancreatobiliary stone and stricture management.

▶ Therapeutic Accessories

The TRUEtome Cannulating Sphincterotome works effectively with these devices:

Trapezoid™ RX Wireguided Retrieval Basket

Extractor™ Pro Retrieval Balloon Catheter

CRE™ Wireguided Balloon Dilator

RX Cytology Brush Wireguided Cytology Brush

Hurricane™ RX Dilatation Balloon Catheter

Advanix™ Biliary Stent with NaviFlex™ RX Delivery System

WallFlex™ Biliary RX Stent System

Dreamwire™ High Performance Guidewire

Hydra Jagwire™ High Performance Guidewire
