Navigator™ HD

Ureteral Access Sheath

Seamless transition from dilator tip to sheath designed for ease of insertion

Navigator™ HD Ureteral Access Sheath

The Navigator HD Ureteral Access Sheath provides ureteral dilation and a working channel for the introduction of ureteroscopes and devices during ureteroscopic procedures. The new flexible tip, higher durometer dilator and sheath, and additional sizes provide solutions for your access needs.

Intended Benefits of a Ureteral Access Sheath

- Enables repeated instrument exchanges, while minimizing damage.¹
- Protects delicate instruments and the flexible ureteroscopes from damage, reducing costly repairs^{2,3}
- Clinically proven to reduce OR time^{1,3}
- Facilitates the navigation through tortuous anatomy⁴
- Aids in the washing out of stone fragments, facilitating complex ureteroscopic procedures and preventing over-distension of the collecting system⁵
- Improves irrigation flow and visualization while decreasing intrarenal pressure¹

Available in Multiple Sizes

Navigator™ HD Ureteral Access Sheath Features

Innovative hub design – secure single-latch mechanism for one-handed latch engagement without rotational alignment.

Hydrophilic coating – on sheath and dilator designed for ease of insertion. Improved coating is designed for durability in bilateral cases.

Kink-resistant sheath – reinforced with a stainless steel coil, designed to provide stability and strength through tortuous anatomy.⁴

Dual durometer dilator – stiffer body designed to reduce buckling to facilitate placement in tortuous ureters.^{4,6}

Single tapered dilator – designed to reduce potential for trauma during insertion and dilation.

Beveled edge – for a smooth transition between sheath and dilator tip.⁶

Radiopaque marker band – designed to facilitate placement of sheath tip under fluoroscopy.⁷
