ABOUT THIS MANUAL

The Boston Scientific LATITUDE remote patient monitoring system creates Implantable Device - Cardiac - Observation (IDCO) messages according to the specifications and definitions published in this document. The messages are compliant to the Integrating the Healthcare Enterprise (IHE) Patient Care Device (PCD) Technical Framework IDCO profile. These messages are used to deliver patient data to electronic medical record (EMR) systems.

This document is intended for Boston Scientific (BSC) LATITUDE customers who (1) integrate IDCO messages into an EMR and (2) use EMR systems to track and manage patient data.

The first section of this document ("LATITUDE IDCO Message Specification") is intended primarily for technical personnel involved in message integration. The second section ("Conversion of Implanted Device Data into IDCO Messages") is primarily intended for the clinician as further clarification of the Boston Scientific version of the data included in the message.

NOTES: *It is assumed that readers of this document are familiar with HL7 and IDCO terminology, specification syntax, data types, message structures, and semantics for IDCO messages. For more information see:*

LATITUDE IDCO MESSAGE SPECIFICATION

The LATITUDE IDCO message is a PCD-09 message per IHE PCD Technical Framework Revision 3.0, October 11th, 2013. Per the technical framework, the message is a standard HL7 v2.6 unsolicited orders and observations message containing observations taken by the implanted device and coded using the ISO/IEEE 11073-10103:2014 IDC nomenclature. This international standard describes a universal model for medical electronic data interoperability.

Values inside quotation marks in the value columns in the tables below indicate hardcoded values that will always appear as shown. Values without quotation marks either indicate an example or a description of the value.

SEGMENT STRUCTURE

All data sent are per PCD-09. Information included in this section is intended to define the BSC output for IDCO messages. It is not exhaustive and is not intended to further define the IDCO nomenclature.

MSH SEGMENT STRUCTURE

The MSH segment contains information about the sender and receiver of the message, the type of the message, a time stamp, etc. It is the first segment of the IDCO message.

ELEMENT NAME	SEQ	SUB SEQ	VALUE
Sending application	3		"LATITUDE"
Sending facility	4		"BOSTON SCIENTIFIC"
Receiving facility	6		LATITUDE Clinic Name
Character set	18		"UNICODE UTF-8"

PID SEGMENT STRUCTURE

The PID segment contains patient identifier information such as name, ID codes, zip code, etc. This information is used for patient matching.

LATITUDE allows clinics to (optionally) add their own Patient ID to the LATITUDE system. The optional patient ID is included in the exported IDCO message. If used, these clinic-defined patient ID appear in the patient identifier list (sequence 3) as text after a tilde (~) character.

Standard IDCO Patient Identifier (first identifier in the list)

ELEMENT NAME	SEQ	SUB SEQ	VALUE
Patient Identifier	3		
Assigning Authority	3	4	"BSX"

Latitude Patient ID (second identifier in the list)

ELEMENT NAME	SEQ	SUB SEQ	VALUE
Patient Identifier List	3		
ID Number	3	1	LATITUDE Patient ID
Assigning Authority	3	4	LATITUDE Clinic Name
Identifier Type Code	3	5	"U"

Example:

```
PID|1|model:N119/serial:123456^^^BSX^U~{LATITUDE Patient ID
^^^^{LATITUDE Clinic Name}^U||PatientLastName^PatientFirstName
^^^^^||19550116|U|...
```

PV1 SEGMENT STRUCTURE

The PV1 (Patient Visit) segment contains information regarding the patient's attending physician.

ELEMENT NAME	SEQ	SUB SEQ	VALUE

PV2 SEGMENT STRUCTURE

The PV2 (Patient Visit 2) segment contains information regarding the patient's LATITUDE group.

ELEMENT NAME	SEQ	SUB SEQ	VALUE
Organization name (group)	23	1	LATITUDE group name Example: Cardiology
ID number (primary or secondary patient group)		3	1 See note a

- a. This value will be "1" if the HL7 file is associated with the primary LATITUDE group, and it will be "2" if it is associated with the secondary LATITUDE group.

OBR SEGMENT STRUCTURE

OBR segments are the section headers for individual OBX interrogation information segments. They contain data such as timestamps, report identifier, and a unique system-generated identifier.

ELEMENT NAME	SEQ	SUB SEQ	EXAMPLE VALUE
Universal Service Identifier	4		
Identifier		1	754053
Text		2	See note a
Observation date/time #	7		20060429080005+0000 See note b
Result Status	25		"F" See note c

- a. The universal service identifier text will be of the form MDC_IDC_ENUM_SESS_TYPE {session type} (e.g., MDC_IDC_ENUM_SESS_TYPE_RemoteScheduled).
- b. Observation date/time will be the timestamp for when the implanted device interrogation occurred. The timestamp will be in the time zone that is set up for the patient.
- c. Result status will be "F" (final results).

OBX SEGMENT STRUCTURE

OBX segments contain data gathered during the most recent device interrogation.

ELEMENT NAME	SEQ	SUB SEQ	VALUE
Observation result status	11		"F" See note a
Date/Time of the Observation	14		20060317170000+0000 See note b

- a. Result status will be "F" (final results).
- b. Date of the measurement will be included if the measurement date differs from the observation date in the OBR.

OUTPUT PARAMETERS

- Strings will be sent in the language configured for the clinic in LATITUDE.
- Numerical values will always be sent using the dot “.” as the radix point (i.e., decimal point).

NTE SEGMENT STRUCTURE

- ICM Devices
 - If there is a monitoring disabled condition, its NTE precedes one or more alert NTEs. A monitoring disabled condition NTE contains one or more monitoring disabled conditions in one NTE.
 - If there is an event alert, there is one NTE for the event alert count. Example:

NTE|3||2 red event alerts, 3 yellow event alerts
 - If there is an alert other than event alert, there is one NTE for each alert.
- S-ICD Devices
 - If there is a warning, a warning NTE precedes all other NTEs. A warning NTE contains one or more warnings in one NTE.
 - If there is no warning and the device is in a mode where settings are not relevant (e.g., MRI mode), the first NTE contains information about the current state of the device. Example:

NTE|1||Beeper is currently Disabled.\br\\.br\The Device is in MRI Protection Mode.\br\Start time: Sep 04, 2015 00:45 CDT\br\Scheduled time-out: Sep 04, 2015 06:45 CDT\br\After MRI Protection mode is exited, Therapy will be ON.
 - If there is no warning and the device is in a mode where settings are relevant, the first NTE contains settings information in a label:value format with each setting separated by a line break (\br\). Example:

NTE|1||Sensing Configuration: Primary.\br\Gain Setting: 2X\br\Post Shock Pacing: ON
 - If the device is in a mode where settings are relevant but beeper is disabled, the first NTE contains settings information in a label:value format with each setting separated by a line break (\br\). Example:

NTE|1||Sensing Configuration: Primary.\br\Gain Setting: 2X\br\Post Shock Pacing: ON

 - The second NTE contains beeper disabled status.
 - If there is an alert, there is one NTE for each alert.
- All Other Devices
 - If there is a warning, a warning NTE precedes one or more alert NTEs. A warning NTE contains one or more warnings in one NTE.
 - If there is an alert, there is one NTE for each alert.

REPORTS

Configuration

IDCO message content is configurable via the LATITUDE website as follows:

Configuration Option	LATITUDE NXT		LATITUDE Clarity
	Pacemaker, Defibrillator, CRT	S-ICD	ICM
Maximum Output File Size	X	X	X
When to Send Data	X	X	X
Report Configuration			
Include PDFs	X	X	X
Single or Multiple PDFs	X	X	X
Which Reports to Include			X
Histograms and Trends in Follow-up Report			X
S-ECG for Symptom + Device Detected Episodes			X

- Maximum Output File Size: The maximum file size of the IDCO message in MB; Event Detail PDFs will not be included in the message as necessary to stay below the maximum file size limit.
- When to Send Data:
 - LATITUDE NXT: Send data upon arrival or manually.
 - LATITUDE Clarity: Send data upon arrival, manually, or upon dismiss, individually for each Reason (e.g., scheduled, patient initiated, daily with alert, etc.).
- Include PDFs: Include or do not include report PDFs in the message.
 - Single or Multiple PDFs: If PDFs are included, combine all reports into a single PDF or send as individual PDFs.
- Which Reports to Include: Which of the possible reports (Follow-up, Presenting S-ECG, Event Detail) to include in the message.
- Histograms and Trends in Follow-up Report: Determines if histograms and trends will be included in Follow-up Reports.
- S-ECG for Symptom + Device Detected Episodes: For symptom + device detected episodes, include only the device-detected S-ECG in the PDF or include the entire combined device-detected and symptom S-ECG.

The following reports may be included in an IDCO message for the implantable device categories:

Report Type	LATITUDE NXT		LATITUDE Clarity
	Pacemaker, Defibrillator, CRT	S-ICD	ICM
Combined Follow-up	X		
Arrhythmia Logbook	X	X	
Heart Failure Management	X		
S-ICD Summary		X	

Report Type	LATITUDE NXT		LATITUDE Clarity
	Pacemaker, Defibrillator, CRT	S-ICD	ICM
Presenting EGM/S-ECG	X	X	X
Event Detail	X	X	X
Follow-up			X

Presenting EGM/S-ECG Report

If available in the payload received from the implanted device, the Presenting EGM/S-ECG Report is attached to the message as a PDF. If the IDCO message configuration is set to send separate PDF reports, the PDF report will be associated with the appropriate APMRT episode using the group ID (OBX-4) for the APMRT episode.

Event Detail Report

If one or more episode is present in an interrogation received from the implanted device, a PDF of the Event Detail Report is sent for each episode. If the IDCO message configuration is set to send separate PDF reports, each PDF is associated with the appropriate episode (MDC_IDC_EPISODE) group using the group ID (OBX-4). In an effort to limit the EMR file size and number of episodes included in the message, an episode may not always have an associated PDF. If the number of episode PDFs is limited, the system will attempt to balance ensuring that PDFs of higher priority and some lower priority episode types will be included. If the IDCO message configuration is set to send separate PDF reports, the name of the episode, including the episode ID, will be included in the message (see "Report Names in Message" section in this document for details).

Example:

```

CONVERSION OF IMPLANTED DEVICE DATA INTO IDCO MESSAGES

CHAPTER 2

This chapter contains the following topics:

- “Battery Status” on page 2-2
- “SET_BRADY_SENSOR_TYPE” on page 2-2
- “Zone Type Mapping” on page 2-2
- “Episode Mapping” on page 2-3
- “Counter Mapping” on page 2-5
- “Lead Configuration Mapping” on page 2-7
- “System Limitations” on page 2-8
- “Alert and Warning Definitions” on page 2-8

BATTERY STATUS

Enumerations for battery parameters map to BSC battery status as follows:

BSC BATTERY STATUS (ICM Devices)	BSC BATTERY STATUS (S-ICD Devices)	BSC BATTERY STATUS (All Other Devices)	IDCO BATTERY STATUS
OK	>10% remaining to ERI	BOL	BOS
N/A	<= 10% remaining to ERI	OY	MOS
RRT	ERI	ERI	RRT
EOL	EOL	EOL	EOS

When an implanted device enters limited telemetry, its battery status could be either ERI or EOL. Either battery status will result in the same message: ENUM_BATTERY_STATUS_RRT (ERI) in MSMT_BATTERY_STATUS with the ERI timestamp in MSMT_BATTERY_DTM. This condition applies to limited telemetry only and does not apply to ICM or S-ICD devices.

SET_BRADY_SENSOR_TYPE

The sensor type will be sent as shown in the table below.

VALUE SENT FOR SET_BRADY_SENSOR_TYPE VARIABLE BASED ON IMPLANTED DEVICE SETUP	IMPLANTED DEVICE SETTING
"Accelerometer"	Accelerometer only
"Minute Ventilation"	MV only
"Accelerometer + MV"	Accelerometer and MV

The above values will only be sent if the rate can be driven by the sensor (i.e., not sent if the sensor is in a monitor-only state).

The above values will be sent if the rate can be driven in the normal brady mode or in ATR (i.e., the value is not just reflective of the normal brady mode).

Note that "ATR Only" can be displayed in reports when the ATR mode is a rate-responsive mode, and the normal brady mode is not rate responsive. In that case, the text (e.g., "Accelerometer") will still be sent for the ATR mode. The user can look at the brady mode and ATR mode and determine that the rate response is for ATR only.

ZONE TYPE MAPPING

The zone settings will be sent as shown in the table below.

BSC ZONE TYPE	IDCO NORMATIVE ZONE TYPE	IDCO VENDOR-SPECIFIC ZONE TYPE	IDCO VENDOR-SPECIFIC ZONE TYPE CODE
VT	VT	BSX-Zone_VT	771137
VT-1	VT	BSX-Zone_VT-1	771138

EPISODE MAPPING

Episodes, counters, etc., will be sent relative to the information that is contained in the interrogation. The same information will be sent initially and in a subsequent resend even if there are interrogations in between. Note that the EMR output will not always match what is displayed in the Quick Notes report because Quick Notes display episodes, alerts, and counters since the last reset. Episodes are represented by a combination of normative and vendor-specific types. Some Boston Scientific episode types cannot be uniquely represented in the current IDCO nomenclature.

Some counters are summed before sending in the message. This is because all Boston Scientific counters currently cannot be represented in the IDCO nomenclature. The counter values sent will be since the last reset.

LEAD CONFIGURATION MAPPING

The table below shows how IDCO and BSC define multi-electrode leads. This table is not intended as an exhaustive list, but rather includes only enumerations that may not be obvious.

The definitions that BSC use are designed to be consistent with the Programmer Recorder Monitor (PRM) and the LATITUDE website.

BSC ELECTRODE NAME	IDCO ELECTRODE LOCATION	IDCO ELECTRODE NAME
Can	Other	Can
LVTip1	LV	Tip
LVRing2	LV	Ring1
LVRing3	LV	Ring2
LVRing4	LV	Ring3

MDC_IDC_ENUM_ELECTRODE_LOCATION (pace/sense anode/cathode location) currently does not include an enumeration for the pocket (i.e., can). Location will be sent as "other" and electrode as "can."

A "check lead" status indicates a possible issue with the lead; however, the absence of a "check lead" status does not indicate a properly performing lead. A "check lead" status will be sent if any of the following status indicators are present:

- S-ICD Devices
 - High electrode impedance
- All Other Devices
 - Lead safety switch
 - Impedance out of range
 - Amplitude out of range
 - Low shock impedance
 - High shock impedance
 - High voltage during charge

For MSMT_LEADCHNL_[CHAMBER] (i.e., lead channel measurements such as intrinsic amplitude, lead impedance, pacing threshold), only one timestamp range is possible for all measurements (i.e., not one range per measurement) in the current IDCO nomenclature. If the measurement times are different, a timestamp range (i.e., MIN, MAX) will be sent that is inclusive of the time of all the measurements. Further, the values that will be sent will be an IDCO MEAN value per the IDCO nomenclature. However, the values are single measurements and are not mean values over the timestamp range.

SYSTEM LIMITATIONS

- Tachy-specific and chamber-specific output are as precise as possible. However, in some cases, the importance of sending the data and the fact that IDCO cannot represent certain parameters warrants sending the data anyway. For example, VT-zone information is sent as if brady devices had a VT zone.
- For devices that do not have the automatic pace threshold (Autothreshold feature), the last in-office threshold measurement will be sent.
- Proper reporting of implanted device data and alert notifications by the LATITUDE NXT system depends on the implanted device clock being programmed accurately with a Programmer/Recorder/ Monitor (PRM). Proper reporting may continue to be impacted for some period of time after the implanted device clock is programmed correctly, depending on the amount of data received with inaccurate time information and the time difference of the implanted device clock error.
- Strings will be sent in the language configured for the clinic in LATITUDE.

ALERT AND WARNING DEFINITIONS

Warning and alert messages are included in the message as notes that may or may not be displayed in an EMR. A warning or alert is included in the message if the data that was uploaded from the implanted device drove the warning or alert.

EXAMPLE IDCO FILES

CHAPTER 3

This chapter contains the following topics:

- “Example IDCO Files” on page 3-2
- “Example Message 1 – S-ICD device” on page 3-2
- “Example Message 2 – ICM device” on page 3-4
- “Example Message 3– Other therapy devices (not S-ICD)” on page 3-7

EXAMPLE IDCO FILES

The following example IDCO files show what LATITUDE IDCO messages might look like. These are only two examples of the many possible outcomes. Data within the example messages is hypothetical, and not all LATITUDE IDCO terms are represented.
